

# HMI software; advanced software for touchpanels: Web userinterface + menu/control + IP-phone + FCE-net

## Highlights

The HMI software is a complete software bundle for HMI systems, operator consoles or touchpanels.

This toolset is usefull for visualization, control and even talk/listen (when supported by the hardware model).

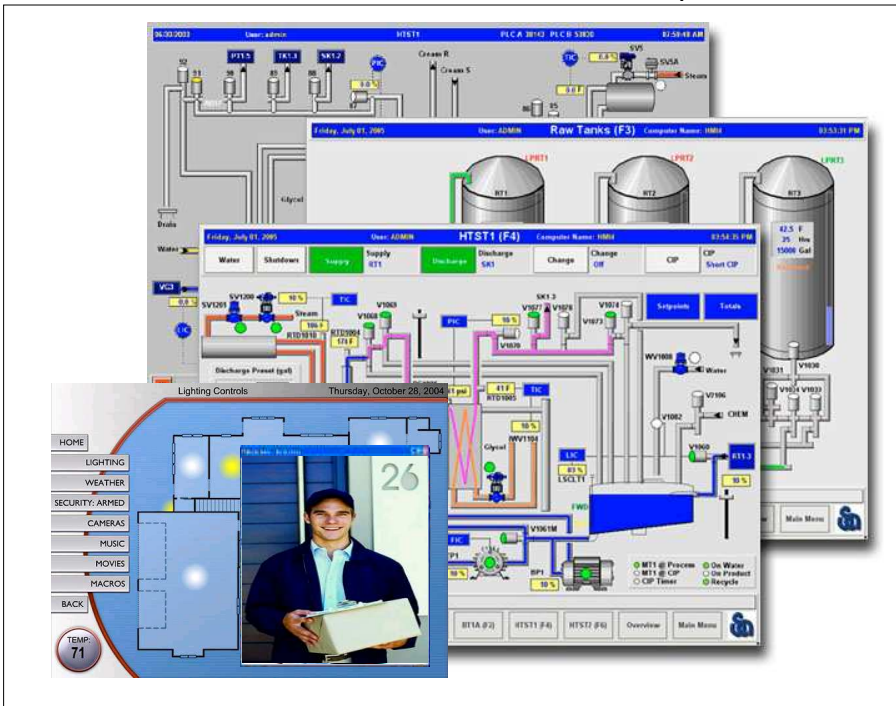

## Applications

Visualization of process data or building status

Operator control panel

Doorstation; Door intercom system

Extra userinterface for FieldCommander I/O controllers.

## Powerful software

- Linux based
- No PC required !!!

## Reliable software

- Designed and tested for high reliability

## Ready for the future

- Web enabled
- IP-based

## High performance

- The FieldCommander sw is optimized for fast operation with high throughput.

## Maintenance

- The HMI system can be easily configured with the Device Manager utility that is included also.

## Options

- The HMI software can be extended with additional software options on request.

## Hardware models

- Several hardware models available
- Check the datasheets of the HMI-models for the details.

## Software: webinterface

- The HMI-software contains an embedded browser to display your webpages. Video display of IP-camera's can be included also.
- A flash player is also built in.

## Software: menu/control

- Touchscreen support is included in the HMI-software.
- A virtual keyboard is also supported.

## Software: VoIP

- A SIP-client for VoIP application supporting the audio listen and talk functionality of the hardware unit.

## Software: FCE-net

- A FCE-net server is implemented also for easy integration with other servers, like FieldCommanders for total solution applications with building automation and doorphone functionality.
